Investment Strategy

The Argo Fund is a diversified global emerging markets debt and macro fund with a master-feeder structure. The Argo Fund seeks to capture alpha through long and short investment in EM corporate, sovereign and distressed credit and FX. The fund uses a macro hedging overlay strategy to actively manage portfolio duration, volatility and correlation.

Monthly Commentary

Argentina sovereign and province of Buenos Aires bonds were the fund's top performers this month as the government sought to eventually conclude negotiations with the IMF ahead of the USD2.8bn repayment in March. Argentina owes a total of USD19bn to the IMF in 2022 and the two sides clearly disagree over the speed at which the country should reduce its fiscal deficit. Officials are resisting monetary and fiscal adjustments that would be politically unpopular ahead of the elections in 2023. We believe that pragmatism will succeed

Our basket of Chinese real estate credits suffered as investors were spooked by the uncertain restructuring process for mainland operating companies. Additionally, the crisis appears to be spreading to the stronger credits within the sector. Our short position in Shimao was previously closed and we went long in our distressed book as we think valuations are attractive at this level. We believe that the government will continue to monitor and manage the situation through policy actions and are of the view current bond prices in some of the names are overly pessimistic.

Sri Lanka continued to disappoint as the 2027 bond traded towards 50. Whilst the government appears committed to repaying foreign creditors (and the January 2022 bond price reflected this expectation), we believe options and time are running out. Whilst tourism revenue is expected to ramp up as pandemic fears abate; the government has been unable to narrow the fiscal deficit.

We shaved risk in high beta names such as Egypt, Nigeria and Ukraine during the month after the recent negative price action. We also added a short in CDX:EM to hedge against further downside risk in the sector.

In the macro book, our Polish rates short continued to perform as inflation once again printed higher than expectations, with CPI reaching 7.8% yoy. We also added short end receiver swap in Brazil. Elsewhere we replaced our UST futures short with short positions in Peru and Brazil. We also shorted S&P futures as a macro hedge - the market continued to rally into year-end despite the expected Fed tightening in 2022.

Portfolio Statistics	
Duration	0.84
99% 1-month VaR	8.86%
Average Credit Rating ¹	CC
Average Yield to Maturity	8.96%
Annualised Downside Risk (1-Year)	4.76%
